Education

University of San Francisco | San Francisco, CA

M.S. Computer Science — Expected: May 2027

B.S. Computer Science, Magna Cum Laude — Graduated: May 2025

Relevant Coursework: Automata Theory, C and Systems, Computer Architecture, Computer Networks, Data Structures & Algorithms, Machine Learning, Full-Stack Software Development

Professional Experience

University of San Francisco, ITS — Oct 2025 – Present

Mobile Developer

- Building features within the university's mobile app, USFMobile, using the MERN tech stack (Mongodb, Express.js, React, Node.js) and CampusM AEK.
- Keep track of tickets in Jira.

Project Drawdown — Jan 2025 – May 2025

Software Engineer Intern

- Created a web application (carbonincontext.com) that puts greenhouse gas emissions into intuitive comparisons that reflect real-life contexts. Utilized Flask framework in Python for backend, JavaScript, Html, and CSS for frontend, Railway paired with Cloudflare for hosting.
- Built the backend and frontend for the comparison cards--a key feature that allows users to contextualize emissions across different equivalencies such as 'how many cars driven', 'how many flights from LA to NY', and many more.
- Drew my own wireframe and took part in a dot exercise with the team and project sponsor, with the goal of aligning on a shared vision from all of our designs to redesign the app's UI.

Projects

Hirearchy

- Created a web application that allows neat organization and tracking of job applications with reminders. Backend built with Java Springboot and frontend using JavaScript with HTML/CSS. Utilized Auth0 for authentication, Mongodb for database, and Docker for containerization.

AQI Predictor

- Built a Long Short-Term memory (LSTM) recurrent neural network model to predict San Francisco's Air Quality Index (AQI) with 87% accuracy. Used Python libraries including PyTorch and scikit-learn for the model, and Pandas for data preprocessing.

Search Engine

- Developed a full-stack search engine in Java featuring an in-memory inverted index and multithreaded web crawler with 2,000+ lines of code (SLOC). Utilized Apache OpenNLP, Apache Log4j2, sockets, HTTP, Jetty servlets, HTML, Bulma CSS framework. Deployed JUnit for testing, Apache Maven for build management, and GitHub for version control.

Technical Skills

- **Programming Languages:** Java, Python, JavaScript, SQL, C, RISC-V Assembly
- **Libraries & Frameworks:** OpenAI API, PyTorch, TensorFlow, scikit-learn, Pandas, Flask, Springboot
- **Software & Tools:** Auth0, Mongodb, GitHub, Jupyterlab, VSCode, Intellij, Microsoft Office 365, Google Suite, Oracle VM VirtualBox, Wireshark, Ubuntu, Slack, Jira, ServiceNow, Railway
- **OS/Hardware:** Linux, Windows, Mac
- **Languages:** Fluent in English and Russian
